

EFEKTYWNY™

sand filter in modular construction

EFEKTYWNY™ sand filter to be built on the spot. Easy to install in existing buildings. Manufactured in standard sizes of 7,2m², 14m² and 21,6m². On the bottom special material in plastic to minimise deposits.

The sand filter is made of stainless steel and is built on the spot. Suitable for existing as well as new buildings. The filter technique is tried and tested and is very effective. Anlager recommends a run through of water of 3m³ per m² and hour. Together with the EFEKTYWNY™ aerator pipe you achieve optimal result.
